

Haunted Forest Text Adventure: Minimal Step Algorithm

1. Game Initialization

1. Start an execution loop that wraps the core gameplay until the user chooses to exit.
2. Set the baseline game variables: `score = 0` and create an empty decisions tracker list.
3. Prompt the user to enter their character name.

2. Branch Path 1: The Mysterious Path (Choice A)

1. If Choice 1 is "A": Increase score (+20) and track the choice.
2. Prompt for Choice 2 (Cross river vs. Walk along bank):
 - **Cross River (Choice A):** Increase score (+20), track choice, and prompt for Choice 3 (Help vs. Ignore traveler):
 - *Help:* Increase score (+30), track choice, trigger **HERO ENDING**.
 - *Ignore:* Decrease score (-8), track choice, trigger **LONELY ENDING**.
 - **Walk along bank (Choice B):** Increase score (+10), track choice, trigger **LOST ENDING**.
 - *Any other input:* Display an invalid choice alert and exit game function.

3. Branch Path 2: The Dark Cave (Choice B)

1. If Choice 1 is "B": Increase score (+8) and track the choice.
2. Prompt for Choice 2 (Open vs. Leave treasure chest):
 - **Open Chest (Choice A):** Increase score (+20), track choice, and prompt for Choice 3 (Gold vs. Magical Map):
 - *Take Gold:* Increase score (+20), track choice, trigger **RICH ENDING**.
 - *Take Map:* Increase score (+30), track choice, trigger **EXPLORER ENDING**.
 - **Leave Chest (Choice B):** Decrease score (-5), track choice, trigger **REGRET ENDING**.
 - *Any other input:* Display an invalid choice alert and exit game function.

4. Score Evaluation & End Summary

1. If Choice 1 matches neither "A" nor "B", display an invalid choice alert and exit.
2. Print the summary dashboard containing the player's Name, Achieved Ending, and Final Score.
3. Determine and print the player's Tier Rank based on score thresholds:
 - $\text{Score} \geq 50 \rightarrow$ **Master Adventurer**
 - $\text{Score} \geq 30 \rightarrow$ **Expert Explorer**
 - $\text{Score} \geq 20 \rightarrow$ **Adventurer**
 - $\text{Score} < 20 \rightarrow$ **Beginner**
4. Iterate through the decisions list to display a numbered log of the steps taken.
5. Prompt for replay option; if response is not "yes", break execution loop and terminate.
